

Aluminum Water Heater Pans

The Eastman Aluminum Water Heater Drain Pan is designed to protect floors and fixtures from water damage caused by leaks or runoff.

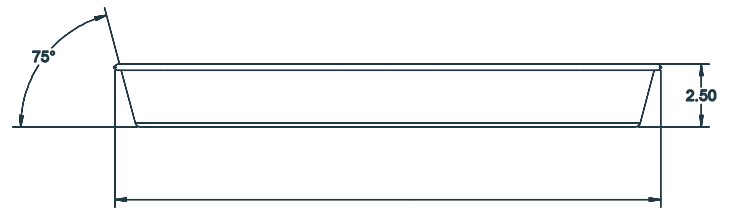

Constructed from high-strength aluminum, this drain pan provides durability and corrosion resistance, making it an excellent choice for long-term reliability.

Each pan includes a 1 in. CPVC or PVC drain fitting for easy connection to a drain pipe through a pre-cut side opening. Available in multiple sizes, it accommodates a wide range of water heater dimensions.

Applications

Designed for use with gas and electric water heaters to comply with local plumbing codes. Provides a protective barrier against leaks, preventing potential structural damage. Ideal for residential and commercial installations requiring water containment and drainage.

Water Heater Drain Fittings

Each Eastman Water Heater Drain Pan includes a high-quality drain fitting, designed for secure and efficient water drainage. The fitting allows for a simple connection to a drain pipe, helping to redirect leaks or excess water safely away from the installation site.

Applications

Compatible with both aluminum and plastic water heater pans.
